Good Morning Britain's Susanna Reid is used to grilling guests on the sofa every morning , but she is cooking up a storm in her latest role - showing families how to prepare delicious and nutritious meals on a tight budget.

In Save Money: Good Food, she visits a different home each week and with the help of chef Matt Tebbutt offers top tips on how to reduce food waste, while preparing recipes for under £5 per family a day. And the Good Morning Britain presenter says she's been able to put a lot of what she's learnt into practice in her own home, preparing meals for sons, Sam, 14, Finn, 13, and Jack, 11.

"We love Mexican churros so I buy them on my phone from my local Mexican takeaway restaurant, "she explains. "I pay £5 for a portion (份), but Matt makes them for 26p a portion, because they are flour, water, sugar and oil. Everybody can buy takeaway food,

but sometimes we 're not aware how cheaply we can make this food ourselves.”

The eight-part series(系列节目), Save money: Good Food, follows in the footsteps of ITV's Save Money : Good Health, which gave viewers advice on how to get value from the vast range of health products on the market.

With food our biggest weekly household expense, Susanna and Matt spend time with a different family each week. In tonight's Easter special they come to the aid of a family in need of some delicious inspiration on a budget. The team transforms the family's long weekend of celebration with less expensive but still tasty recipes.

24.What do we know about Susanna Reid ?

- A. She enjoys embarrassing her guests.
- B. She has started a new programme.
- C. She dislikes working early in the morning.
- D. She has had a tight budget for her family.

25. How does Matt Tebbutt help Susanna

- A. He buys cooking materials for her.
- B. He prepares food for her kids.
- C. He assists her in cooking matters.
- D. He invites guest families for her.

26. What does the author intend to do in paragraph 4 ?

- A. Summarize the previous paragraphs.

Languages have been coming and going for thousands of years, but in recent times there has been less coming and a lot more going. When the world was still populated by hunter-gatherers, small, tightly knit(联系)groups developed their own patterns of speech independent of each other. Some language experts believe that 10,000 years ago, when the world had just five to ten million people, they spoke perhaps 12, 000 languages between them.

Soon afterwards, many of those people started settling down to become farmers, and their languages too became more settled and fewer in number. In recent centuries, trade, industrialisation, the development of the nation-state and the spread of universal

compulsory education, especially globalisation and better communications in the past few decades, all have caused many languages to disappear, and dominant languages such as English, Spanish and Chinese are increasingly taking over.

At present, the world has about 6,800 languages. The distribution of these languages is hugely uneven. The general rule is that mild zones have relatively few languages, often spoken by many people, while hot wet zones have lots, often spoken by small numbers. Europe has only around 200 languages; the Americas about 1,000; Africa 2,400; and Asia and the Pacific perhaps 3,200, of which Papua New Guinea alone accounts for well over 800. The median number(中位数) of speakers is mere 6,000, which that half the world's languages are spoken by fewer people than that.

Already well over 400 of the total of 6,800 languages are close to extinction (消亡), with only a few elderly speakers left. Pick, at random, Busuu in Cameroon (eight remaining speakers), Chiapaneco in Mexico (150), Lipan Apache in the United States (two or three) or Wadjigu in Australia (one, with a question-mark): none of these seems to have much chance of survival.

28. What can we infer about languages in hunter-gatherer times?

A. They developed very fast

- B. They were large in number
- C. They had similar patterns
- D. They were closely connected

29. Which of the following best explains "dominant" underlined in paragraph 2 ?

- A. Complex
- B. Advanced
- C. Powerful.
- D. Modern

30. How many languages are spoken by less than 6,000 people at present ?

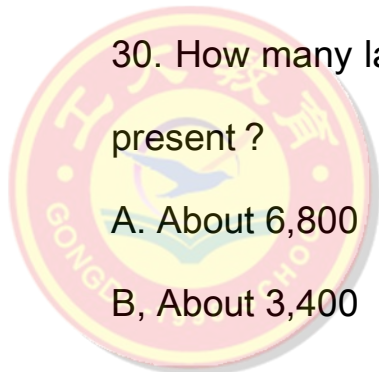

- A. About 6,800
- B. About 3,400
- C. About 2,400
- D. About 1,200

31. What is the main idea of the text?

- A. New languages will be created.
- B. People's lifestyles are reflected in languages.
- C. Human development results in fewer languages.
- D. Geography determines language evolution.

sight of something shiny and new, but a new study shows that we keep using our old devices (装置) well after they go out of style. That's bad news for the environment- and our wallets - as these outdated devices consume much more energy than the newer ones that do the same things.

To figure out how much power these devices are using, Callie Babbitt and her colleagues at the Rochester Institute of Technology in New York tracked the environmental costs for each product throughout its life - from when its minerals are mined to when we stop using the device. This method provided a readout for how home energy use has evolved since the early 1990s. Devices were grouped by generation. Desktop computers , basic mobile phones, and box-set TVs defined 1992. Digital cameras arrived on the scene in 1997. And WP3 players, smart phones, and LCD TVs entered homes in 2002 , before tablets and e-readers showed up in 2007.

As we accumulated more devices, however, we didn't throw out our old ones.

"The living-room television is replaced and gets planted in the kids' room, and suddenly one day , you have a TV in every room of the house," said one researcher. The average number of electronic devices rose from four per household in 1992 to 13 in 2007. We're not just keeping these old devices - We continue to use them. According to the analysis of Babbitt's team, old desktop monitors and box TVs with cathode ray tubes are the worst devices with their energy consumption and contribution to greenhouse gas emissions (排放) more than doubling during the 1992 to 2007 window.

So what's the solution(解决方案)? The team's data only went up to 2007, but the researchers also explored what would happen if consumers replaced old products with new electronics that serve more than one function, such as a tablet for word processing and TV viewing. They found that more on-demand entertainment viewing on tablets instead of TVs and desktop computers could cut energy consumption by 44%.

32. What does the author think of new devices?

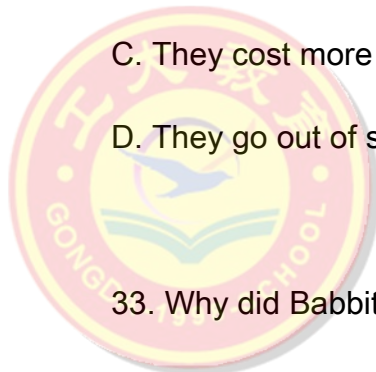

- A. They are environment-friendly.
- B. They are no better than the old.
- C. They cost more to use at home.
- D. They go out of style quickly.

33. Why did Babbitt's team conduct the research?

- A. To reduce the cost of minerals.
- B. To test the life cycle of a product.
- C. To update consumers on new technology.
- D. To find out electricity consumption of the devices.

34. Which of the following uses the least energy?

- A. The box-set TV.
- B. The tablet.
- C. The LCD TV.
- D. The desktop computer.

Color is fundamental in home design-something you'll always have in every room. A grasp of how to manage color in your spaces in one of the first steps to creating rooms you'll love to live in. Do you want a room that's full of life? Professional? Or are you just looking for a place to relax after a long day? 36

 , color is the key to making a room feel the way you want it to feel

Over the years, there have been a number of different techniques to help designers approach this important point. 37 , they can get a little complex. But good news is that there'er really only three kinds of decisions you need to make about color in your home: the small ones, the medium ones, and the large ones.

38 , They're the little spots of color like throw pillows, mirrors and baskets that most of us use to add visual interest to our rooms. Less tiring than painting your walls and less expensive than buying a colorful sofa, small color choices bring with them the significant benefit of being easily changeable.

Medium color choices are generally furniture pieces such as sofas, dinner tables or bookshelves. 39. They require a bigger commitment than smaller ones, and they have a more powerful effect on the feeling of a space.

The large color decisions in your rooms concern the walls, ceilings, and floors. Whether you're looking at wallpaper or paint, the time, effort and relative expense put into it are significant. 40.

- A. While all of them are useful
- B. Whatever you're looking for
- C. If you're experimenting with a color
- D. Small color choices are the ones we're most familiar with
- E. it's not really a good idea to use too many small color pieces
- F. So it pays to be sure, because you want to get it right the first time
- G. Color choices in this range are a step up from the small ones in two major ways

第二节 (共 10 小题;每小题 1.5 分,满分 15 分)

阅读下面短文,在空白处填入 1 个适当的单词或括号内单词的正确形式。

According to a review of evidence in a medical journal, runners live three years 61 (long) than non-runners. You don't have to run fast or for long 62 (see) the benefit. You may drink, smoke, be overweight and still reduce your risk of 63 (die) early by running.

While running regularly can't make you live forever , the review says it 64 (be) more effective at lengthening life 65 walking, cycling or swimming. Two of the authors of the review also made a study published in 2014 66 showed a mere five to 10 minute a day of running reduced the risk

of heart disease and early deaths from all 67 (cause) .

The best exercise is one that you enjoy and will do. But otherwise...it's probably running. To avoid knee pain, you can run on soft surfaces, do exercises to 68(strength) your leg muscles (肌肉), avoid hills and get good running shoes. Running is cheap, easy and it's always 69(energy). If you are time poor, you need run for only half the time to get the same benefits as other sports, so perhaps we should all give 70 a try.
